

OVERTURE™

A FOLDING DOOR SERIES BY ENERGI

LOW PROFILE (ADA) ALUMINUM SILL

A low profile (ADA) aluminum sill is now offered on the Royal **Overture** Folding Door. The **ADA sill** is made of aluminum heavy-duty material construction for maximum strength and rigidity.

This sill complies to *America with Disabilities Act (ADA)* Code 1124B. It utilizes a low profile threshold with gap no greater than ½" in height from surface for better accessibility to people with reduced mobility.

It is the perfect solution for many commercial applications (schools, libraries, restaurants, retail store fronts) when low profile sill is required.

The ADA sill has thermally broken aluminum design reducing heat loss and condensation, ensuring all year round comfort.

Aluminum reinforced vinyl jambs are secure and easily assembled and fastened directly to the aluminum ADA sill.
